

Facilities Issue Routing, Revision 1

NU-OPS-016

Document ID: NU-OPS-016

Status: draft

Version: 1.0

Effective date: 2023-10-01

Access scope: site_operations

Site scope: all_sites

Northstar Urgent Care Cooperative (NUCC)
Status: Draft historical copy (planned status: superseded) · **Revision:** 1
Proposed issue date: 25 September 2023 · **Proposed effective period:** 1 October 2023–20 September 2024
Proposed replacement: NU-OPS-003, if approved, effective 21 September 2024 · **Access scope:** site_operations

Fictional educational test material. This proposed historical procedure describes non-clinical facilities routing only. It is not a current instruction and does not provide clinical, emergency-response, or patient-care guidance.

1. Purpose and applicability

This draft preserves a proposed earlier route for ordinary facilities and workspace issues at Harbor Point, Alder Creek, and Northgate. Its dates and process are invented for historical retrieval testing. The proposal is not evidence that this version was approved or used.

The proposed scope is building and shared-workspace conditions such as a damaged fixture, lighting fault, leak, or facilities repair request. It does not determine clinical operations or establish how to respond to a clinical or emergency condition.

2. Proposed prior issue categories

For the proposed prior process, site staff used two local labels:

Local label	Proposed meaning
Follow-up	A repair or workspace request that could be logged for the site lead's next routine review.
Needs site attention	A condition for which the site lead should be notified during the current site handoff.

These labels are historical proposals only. They do not map to the categories proposed in NU-OPS-003 and should not be used to classify a current issue.

3. Proposed former routing path

Under this proposed Revision 1 path, the staff member who noticed the issue entered it in the local site facilities log or gave the details to the site lead for entry. The site lead reviewed the log, recorded the local priority label, and assigned a local follow-up owner when one was available.

This proposed route used the **site lead and local site log as the normal intake and tracking point**. It did not use a central Facilities Coordinator queue or require a routine central facilities ticket. For “Needs site attention,” the site lead was notified through the site’s ordinary handoff channel. No shared central mailbox, response time, or cross-site escalation route is established by this proposed historical copy.

The site log entry was proposed to contain the site, area, date observed, short description, local label, assigned role if known, and a brief status note. The site lead reviewed open entries at the next local handoff and marked the entry resolved when the site recorded a completed action or a documented transfer to another process.

4. Proposed former escalation and follow-up

If the site lead could not identify a local owner, the proposed practice was to leave the item open in the site log and raise it at the next routine operations coordination meeting. This copy does not establish who attended that meeting, a meeting schedule, a central intake owner, or a guaranteed response.

If a condition also required another reporting route, the local log could note that a separate report had been made. This proposed copy does not define that other process or authorize copying sensitive details into the facilities log.

5. Revision and replacement status

Revision	Issue date	Proposed effective dates	Proposed record
1	2023-09-25	2023-10-01 through 2024-09-20	Local site-lead intake and site-log follow-up; approval and use not established by this draft.

NU-OPS-003 is planned as the replacement for this proposed routing path, with a proposed effective date of 21 September 2024. That replacement is pending approval. If approved, the proposed historical period for this revision ends on 20 September 2024 and supersession by NU-OPS-003 begins on 21 September 2024. The `superseded_by` relationship and date boundary above become authoritative only if the approvals and effective dates for both documents are recorded consistently.

Until NU-OPS-003 is approved and effective, the applicable previously approved controlled source, if any, remains current. This draft does not establish that NU-OPS-016 itself was approved, and it must not be treated as current merely because it describes a proposed earlier period.

6. Historical-use warning

Use this file only for a question about the proposed Revision 1 route or for corpus precedence testing. Do not present its local site-lead intake path as the current route. The accepted directory in NU-OPS-007 lists fictional role-based contacts, but that later directory does not retroactively establish the contents or approval of this proposed historical process.
